

Price of an 8-meter-high communication tower

Overview

Telecom tower pricing typically ranges from \$15,000 to over \$150,000 for the structure itself, heavily dependent on height, design type, and current global steel prices. As for the connection, tubular tower is connected by flange, and angle steel tower is connected by nuts and bolts. Small coefficient of wind load, strong wind resistance. The classification of 80m. In order to ensure product quality, we JIAYAO use CNC production equipment and use modern manufacturing technologies to manufacture communication towers, and the multi-item templates, bending dies, jigs and fixtures can be reused in case of repeat orders. We also strive to perfectly complete each. The costs associated with building a Camouflaged Monopole Tower can vary depending on several factors, including the tower's height, design complexity, camouflage materials used, location, site preparation requirements, and additional features such as antennas and equipment. Available in guyed or self-supporting configurations using Q235B or Q345B steel with hot-dip galvanization, these towers deliver 30-50 year.
