

Primary surge protection for distribution boxes

Overview

Surge protectors (Surge Protective Devices, SPD) installed in distribution board panels are primarily used to protect electrical equipment from transient voltages (surges or spikes) caused by lightning strikes, power grid fluctuations, or other factors. Connecting cables that are too long often lead to problems. Find out about correct installation and how to comply with the required cable. Eaton has an extensive family of surge protective devices (SPD) for any facility or application. Main benefits Offer primary protection against. This requires understanding the exposure risks across your electrical distribution system per the IEEE C62. It discharges the huge energy when the power transmission line is directly struck by lightning, effectively protecting the electrical equipment inside the.
