

Relay protection detector

Overview

Relay protection detector: It's not just about “detecting” What is a relay protection detector?

Simply put, it is an instrument specifically designed for testing and verifying the performance of relay protection devices. Eaton's protective relays provide you with unique microprocessor-based devices that eliminate unnecessary trips, mitigate arc faults, protect motors and breakers, and provide system information to help you better manage your system. Our predictive diagnostic solutions include non-destructive testing. Verify that your protection relays operate correctly when faults occur. For example, unselective protection operation during a medium voltage network fault will cause an outage for an unnecessarily large number of consumers. These devices safeguard assets and maintain power stability by swiftly detecting and isolating faults.
