Second Distribution Box

Overview

Primary Distribution Box: Serves as the main distribution box for a construction site or project (usually only one). The outgoing line from the low-voltage end of the transformer is 0. It is a vital part and central hub of any electrical system. The hub distributes electrical power from a single input source to various circuits throughout a building. Whether it's a home, office, or factory, the DB box makes sure power. Equipment inside usually includes isolating switches, circuit breakers, and residual current devices (RCDs). ACS takes the basic idea of zone wiring and combines it with pre-cut, pre-tested cable and plug-in connectors, to provide power and telecommunication systems that can be installed under raised floors (The Intelligent Floor), or in accessible ceilings (The Intelligent Ceiling).
