

Serbian Silicon Photonics Technology 800G

Overview

On March 2, 2023, at 13:43, SiFotonics, one of the world's leading companies in silicon photonics technology, announced today the launch of 800G low-power-consumption silicon photonics solutions for data centers and AI/ML applications. The 800G optical transceiver unit adopts the silicon photonics. Silicon Photonics (SiPh) transceivers have emerged not as a theoretical alternative, but as a production-proven platform reshaping how high-speed optical modules are designed, built, and deployed. What began as an academic experiment has evolved into a commercially viable technology powering 100G. Silicon photonics integrates optical components with electronic circuits on a single silicon chip, leveraging the scalability of semiconductor manufacturing processes. This technology has gained significant traction, especially with the advent of 800G and 1. The company says these products offer much reduced power dissipation and latency and are ideally suited for rapidly. SiFotonics Technologies Co. Explore deployment best practices for 2025. -News Center-YORANCO- By 2025, global demand for 800G optical modules is estimated to exceed 1.
