

Standard for Class 1 Lighting Distribution Boxes

Overview

Article 501 provides detailed requirements about explosion-proof enclosures, sealing fittings, and wiring methods for Class 1 environments. Class 1 Division 1 locations experience constant exposure to dangerous atmospheres during regular operations. Selecting the right luminaire starts with identifying what hazard is present (Class), how often it is present. Class 1 Div 1 location, C1D1 for short, Class 1 Division 1 for full name, means ignitable concentrations of hazards, such as flammable vapors and gases, exists under normal operation conditions, and/or where hazard is caused by frequent maintenance or repair work or frequent equipment failure. In. Explosion-proof distribution boxes are mainly used in coal mines, fire stations, petroleum, petrochemical installations and textile and other flammable and explosive places. These places are more prone to protection accidents. Weidmuller S K EN series terminals. Cable glands on request (see P7/ leon P6/4) DQM-I (Ex e) is recommended.
