

Switch User Access Control

Overview

To manage UAC settings in Windows, a special applet is available in the Control Panel, which can be launched from the classic Control Panel or with the `UserAccountControlSettings.exe` command. Use the slider to change the Use. To manage UAC settings in Windows, a special applet is available in the Control Panel, which can be launched from the classic Control Panel or with the `UserAccountControlSettings.exe` command. Use the slider to change the User Account Control protection level on a computer. There are 4 predefined UAC levels available:

1. Level 4 — Always notify — the. It is possible to manage UAC settings in Windows through Group Policy. The names of the UAC-related Group Policy options begin with User Account Control and can be found in this GPO editor section Computer Configuration -> Policies -> Windows Settings -> Security Settings -> Local Policies -> Security Options. The following table contains a list of. When you change the UAC protection level by using the slider in the Control Panel, Windows changes the values of the following registry entries. Therefore, if you want to use the GPO to configure UAC settings that correspond to the specific slider level, you only need to configure 3 policy parameters (described above). For example, apply the follow. Let's look at how to completely disable User Account Control (UAC) in Windows through Group Policy. On a standalone computer, use the Local Group Policy Editor `gpedit.msc`. If you need to deploy the Group Policy settings to multiple domain computers, use the Group Policy Management Console – `gpmc.msc` (let's consider this option). 1. In the Group Poli.
