

The indicator light on the fiber optic switch remains on

Overview

Red or off indicates a problem with the fibre line. You will be able to connect if the signal turns green. This document describes how to troubleshoot fiber optic interfaces by addressing some of the fiber optic module and cabling specifications. The information in this document is based on all Catalyst 9000 Series switches. Ensure your Fiber Jack is connected to the network and the LED lights are connected and working properly before moving. Learn what each light on your fiber equipment means—from power and fiber signal to Ethernet and phone service—and how to quickly troubleshoot issues. Solid Green: The ONT is powered on and functioning normally. No Light: The ONT is not receiving. The fiber optic transceiver has 6 LED instructions that show the operating status of the transceiver and, as shown in LED, can determine whether the transceiver is working properly and what might be the problem, thus helping to identify the fault.
