

Using Bare Fiber Optic Adapters

Overview

Bare fibers adapters are a quite convenient method to connect unterminated fibers with regular FC, SC, ST, LC receptacles. You can merely strip, cleave, clean and insert the fiber, without having the hassle of epoxy and epoxy healing steps. In this post, we'll explore what bare fiber adapters are, their benefits, applications, and how they can elevate your fiber optic setup. Traditional optical fiber connections involve assembling various Fiber Adapters fiber optic connectors with raw optical fibers of specific lengths and processing them into patch cords in the factory. The reusable BFT1 is equipped with a magnet and alignment key to quickly attach and align the compatible connectors sold below; these connectors can be. Bare fiber adapter is a media which can provide direct solution for matching the bare fiber with other optical components coupling and connection without splice machine. 55" of exposed glass, depending on connector style.
