

Welding grounding of distribution box

Overview

26 mm² (10 AWG) ground wire must be used, and in all other markets a 6 mm² must be used. Each DISTRIBUTION BOX and controller must be grounded. Grounding of the units: Attach a ground wire from one of. Grounding of electrical circuits is a safety practice that is documented in various codes and standards. The secondary side is solidly grounded and connected with MV grounding. A ground of all overhead line distribution equipment is always grounded and bonded to cont all be consider as a priority, if not available, then 70 mm² copper conducto r normal soil condit. According to the relevant regulations of the Ministry of Construction, the welding machine and the distribution box are made of three-phase five-wire system, and the protection is connected to the PE line. If the welding machine or distribution box needs to be grounded repeatedly, the grounding. Improper grounding during welding operations poses serious threats to the performance and integrity of industrial automation and instrumentation systems.
