

Western European optical fiber cable sheathing

Overview

Sheathe fiber optic bundles comprised of individual strands as small as $25\mu\text{m}$ in diameter. The sheathing process is where you apply the final touch to your loose tube fiber optic cable. Mechanical properties for different cable types are set with armoring and strength members. Our state-of-the-art extrusion technology offers you the ability to utilize a large variety of plastic materials. Zeus manufactures polymer reinforced optical fiber and high-temperature sheathing products to support the latest fiber optic technology. Our scientists and engineers will help you find the right. In FTTH and FTTx networks, cable sheath material is often treated as a secondary specification. Glass fiber and plastic fiber is fragile. Our technology is used to produce. The European Commission's Gigabit Infrastructure Act, which entered into force in 2024, sets a binding target: 1 Gbps connectivity for every European household by 2030, with 5G coverage across all populated areas.
