

What are the distance types of 10G optical modules

Overview

As the demand for bandwidth in data centers, carrier networks, and enterprise networks continues to grow, 10G optical modules are still widely used, especially in mature networks and small and medium-sized enterprise environments. 10G optical modules can be divided into SR (Short. In optical communication, SR and LR SFP modules are among the most widely used solutions, mainly distinguished by their transmission distance, wavelength, and the type of fiber they require. When comparing short-range and long-range options, the choice depends heavily on deployment environments. What is a 10G transceiver?

A 10G transceiver is a small pluggable module (commonly SFP+) or an integrated cable assembly. High-speed data transmission in enterprise and data center networks is driven by 10G optical modules. Choosing the proper SFP+ module, whether it be SR, LR, or ER, can have significant impacts on performance, reliability, and costs. This guide explains each type in a clear and practical way—helping you make the right choice.
