

What instruments are used in fiber optic communication systems

Overview

In order to perform these tests, the basic fiber optic instruments are the FO power meter, test source, OTDR, optical spectrum analyzer and an inspection microscope. These and some other specialized instruments are described below. When the fiber attenuation varies with distance, then the OTDR is the only instrument which can measure the fiber attenuation along the. Fiber optic instrumentation is used to do certain measurement Physical measurements. Optical fiber-based sensor instrumentation has been used extensively for the measurement of physical observables including strain, temperature, and chemical changes in smart materials and smart structures, and has. The predominant use of optical fiber in modern industry is as a data communication medium between digital electronic devices, replacing copper-wire signal and network cabling. An illustration showing two digital electronic devices communicating over a pair of optical fibers appears here, each fiber.
