

What is CTE cable tray

Overview

Perforated cable trays are used in places where cables have to be protected underneath. CT-E-type trays are typically used in office- and commercial buildings, schools, hospitals and shopping centres, but also in warehouses, parking halls and industrial buildings. EAE Cable Tray System product E-Line CT is being manufactured as a hot dipped product that is used in heavy or medium duty application with its perforated design. They serve as an alternative to traditional conduit systems, offering increased flexibility and ease of installation. With normal- and heavy-duty variants, a wide span of sizes, and hot-dip galvanized construction, it delivers long service life in demanding environments. The standard tray length is 3m.
