

What is a smart patch panel

Overview

Smart patch panels integrate diagnostic capabilities to test the fiber optic link remotely. This enables network administrators to accelerate initial deployment, quickly identify and troubleshoot issues, reduce downtime and increase network efficiency. This complete & intelligent-ready physical layer management system uses RFID technology for wireless detection of individual patch cords & real-time monitoring of unintended physical changes in network infrastructure. Belden offers a variety of software solutions. The software helps with managing. SMARTPATCH provides simple and controlled management and recording of common network changes such as those resulting from office moves and terminal additions. What is a Patch Panel?

The original term patch came from telephone. Traditional patch panels behave like filing cabinets: they hold connections but reveal nothing about who opened which drawer or why.
