

What material are plastic electrical distribution boxes made of

Overview

Plastic distribution boxes are protective enclosures used to house and organize electrical components such as circuit breakers, switches, and wiring. Made of ABS or polycarbonate, these boxes offer a combination of strength and lightness. For example, you may need flame retardant features. The. Selecting the right material for small to medium electronic enclosures dictates the long-term reliability of the internal components. While thermoplastics offer significant weight and corrosion-resistance advantages over metal or fiberglass, engineering teams must evaluate the distinct differences. An electrical distribution box serves as the vital physical barrier housing sensitive protective devices. It protects. Metal distribution boxes, made from galvanized steel, stainless steel, or aluminum alloys, offer superior mechanical strength, fire resistance, thermal stability, excellent heat dissipation, grounding capability, and electromagnetic interference shielding.
