

# What s going on with the mobile optical terminal box

## Overview

- Sterlite Technologies announced in November 2024 a strategic partnership with Huawei Technologies to co-develop next-generation optical fiber terminal boxes and related components for 5G backhaul deployments. White-box optical terminal is a network device that transmits and receives optical signals for high-speed data communication. It performs core optical switching and routing functions while supporting interoperability across different network systems. A typical PON topology (GPON, XGS-PON, or 25G PON) flows OLT → fiber distribution hub → passive splitters → distribution/drop fibers → premises. The Optical Fiber Terminal Box Market CAGR (growth rate) is expected to be around 9. 6T quantum-safe encryption solution on the Waveserver platform was designed with this in mind, supporting QKD system interworking and NIST-certified PQC algorithms.
