

What to do if the optical receiver has no output

Overview

To get sound to your cinema system without a TV optical output, you should use an HDMI audio extractor or HDMI ARC. For an audio extractor, connect the TV's HDMI output to the extractor's input, and then connect the extractor's optical output to your sound system. For HDMI ARC, connect your TV to. Whether you are a tech enthusiast or simply looking to enhance your home entertainment setup, understanding alternative solutions and workarounds when your TV does not have an optical output can save you time and money. By following the insights and recommendations outlined in this guide, you can. The connected home theater system, audio receiver, or soundbar isn't set to properly decode the digital signal. Your TV isn't set to a digital channel or playing a video encoded in 5. You can usually find this information. This guide breaks down the invisible barriers in the digital audio chain, from the physical connection to the complex language of bitstreams, ensuring you can finally get your system to sing.
